

Memeo® AutoSync

Overview

At Memeo® we understand how fast paced and distributed your digital life is. That is why we developed Memeo AutoSync; a simple and cost effective tool to keep all of your important files synced between multiple computers. Memeo simplifies the entire syncing process by working silently in the background to guarantee that all your data is where you need it to be. Avoid wasting time searching for your important files across multiple PC's and let Memeo AutoSync help keep your digital life in order.

Key Features:

Bi-Directional Syncing

With Bi-Directional Syncing, you can be sure that the same version of your most up-to-date files are on all your devices.

Continuous Bi-Directional Syncing

No need for manual syncing operations. Memeo AutoSync works in the background, tracking changes made to your data and automatically syncs any changes between your PC and sync device. All of your files are synced without slowing down your computer since changes are synced continuously. Memeo AutoSync also keeps track of your changes when your sync device is not connected and syncs to it as soon as it is.

Broad Destination Support

You can sync to a variety of destinations (external hard drives, USB flash drives, iPods). This insures that your latest work, most current photos, and your favorite music will always be up-to-date on any device. Memeo AutoSync automatically detects attached storage devices, allowing for quick and easy setup.

QuickSelect

Easily sync folders commonly used with one simple click. Memeo QuickSelect allows you to quickly and conveniently sync your Documents, Pictures, Music, and Video folders .

Requirements / Support:

Windows

Microsoft .NET Framework 2.0 (If you don't have it on your system, Memeo AutoSync will install it for you)

512MB RAM

1GHz Intel P3 processor or equivalent

25MB free disk space
